

Power BI Intermediate : Power BI Intermediate

This course shows you how to use the advanced features of Power BI to create interactive dashboards and reports. You will learn how to use DAX formulas and functions, create calculated columns and measures, and work with advanced data visualization techniques. With the no-code artificial intelligence (AI) experiences in Microsoft Power BI, you can easily leverage highly interactive and intelligent visuals to detect patterns in your data, ask questions of your data and discover new insights that can empower every individual and every team in their decision making.

Course Outcomes

Upon successful completion of this course, you will be able to:

- Connect to data in Excel and PDF files
- Calculate data with DAX functions
- Create and customize visualizations
- Create visuals and reports with Artificial Intelligence visualizations
- Share content with others
