

ATEC 184 : Special Topics in Automotive

Credits 5

Quarter Offered Fall

Students will explore special topics in automotive including specialized manufacturer trainings, research emerging electrical vehicle trends, identify restoration and late model vehicle repair considerations, and identify innovative technologies that will impact the future automotive industry. This class may include students from multiple sections.

This class has a \$60 Automotive Technology course fee.

Course Outcomes

- Compare and contrast manufacturer maintenance and repair requirements

- Explore current and future automotive and electrical vehicle trends such as intelligent and connected vehicles.

- Present special topics projects in class
